

# Installation Instructions

## Chain Link Bulldog Hinge

A Bulldog Hinge is an easy to install and operate gate hinge, that is typically used for commercial and industrial chain link gate installations.

1. The larger portion of the hinge shown with U-Bolt simply bolts around the gate post. **(A)** The smaller portion, or Frame Clamp, wraps around gate frame upright.
2. Adjust sleeve from a 1-5/8" gate frame to a 1-7/8" gate frame by inverting sleeve. **(B)**
3. Weld a ring above one of the hinges or attach a brace band above hinge **(C)** in order to keep gate from sliding to ground.
4. Hinge actually uses the chain link gate frame as a "hinge pin."

**\*Note:** The Frame Clamp does not fit snug around gate upright, therefore allowing the gate upright to pivot freely. It will be somewhat loose on gate frame. This is normal.

**Always Wear Safety Goggles & Gloves • Thank You for your order**
